

Storage bin cabinets

Sturdy storage bin cabinets are a user-friendly way of storing different components and products, including slightly larger ones, so that they can be kept well-organised and readily available. They only take up a little floor space, but by using dividers, a large unit can have as many as 336 separate sections in total. Small bin cabinets can be mounted on a wall, stacked on top of each other on the floor, or mounted on a turntable. Accessories, such as a locking system and wheels, make the bin cabinets very user-friendly.

- The bin cabinets include a frame and shelf bins with labels
- A sturdy steel frame that can withstand heavy-duty use
- A backstop prevents the bins from falling off
- Maximum load per large storage bin cabinet 240 kg, 30 kg per shelf; required floor area 0.25 m²
- Adjustable leg caps help ensure that large cabinets stand straight and firmly in place on uneven floors
- Equipped with wheels, large bin cabinets serve as mobile storage solutions
- Accessories include retaining bars, which prevent the drawers from opening if the cabinet is kept on board a service vehicle, for example
- Models with ESD protection are also available
